Metrowerks CodeWarrior Interface

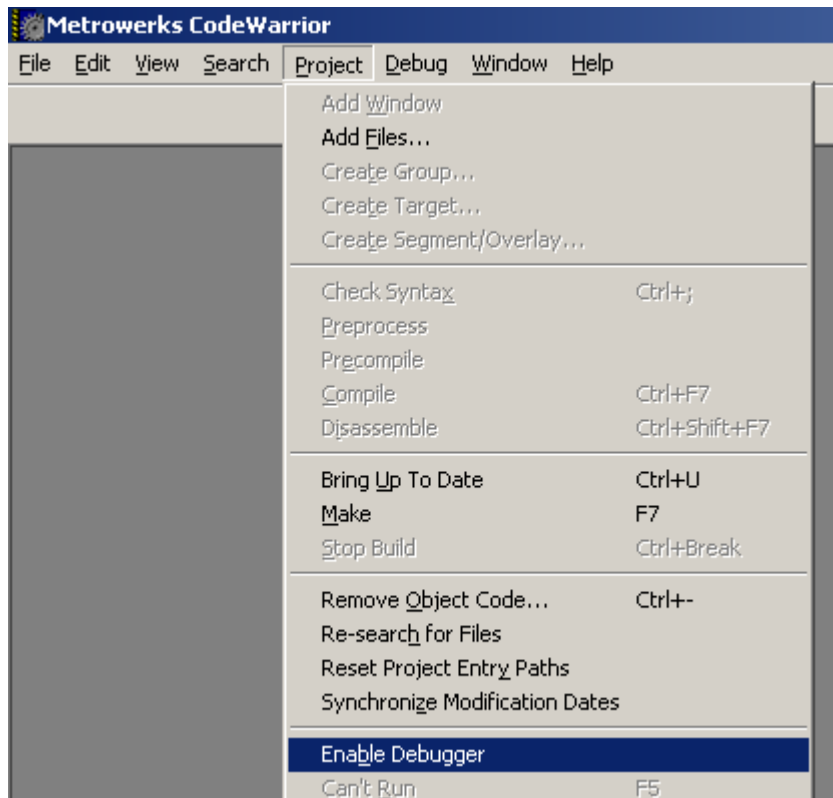

Follow these steps to establish integration of winIDEA to Metrowerks CodeWarrior environment:

- Install the CodeWarrior
- Install winIDEA
- Start CodeWarrior and open a project
- Click the 'Settings' icon in the project window
- Select 'Target/Build Extras' and specify winIDEA's Launcher as the third party debugger (specify the path that applies to your winIDEA installation):

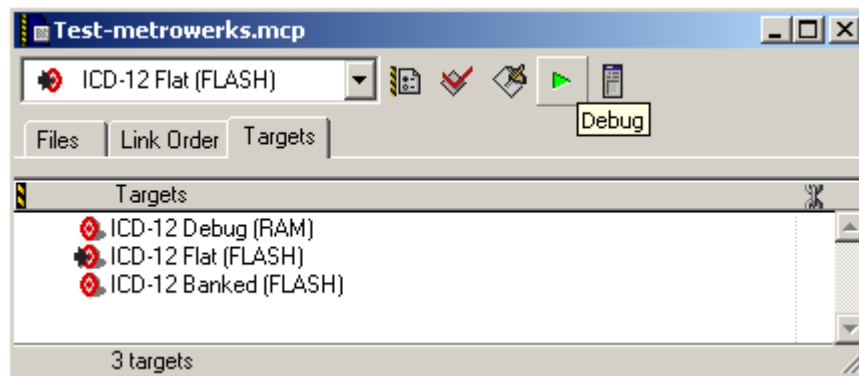

- Close the dialog with the 'Save' button.
- Compile the project.

- Make sure the the debugger is enabled. If Project menu has an item reading **Enable Debugger**, click it.

- Click the 'Debug' icon in the project window:

winIDEA will start. If this is the first time the winIDEA was invoked from this project, it will prompt you to enter the configuration settings (hardware type, communication, CPU...); otherwise it will proceed immediately to download.
